

Heating furnace for aluminum cast wheels, **FLOW FORMING**

Stable forming with rapid heating and high-temperature accuracy!
Eliminates overheating risk, even during prolonged stoppages!

■ Specification

Material: AC4CH(A356)
Process material: Road wheels
Unit weight: MAX. 20kg
Processing capacity: 1800kg/h
Cycle time: 40 sec / cycle
Heat source: L.P.G. or L.N.G.
BURNER capacity: 350kW
(300,000kcal/h)
TYPE: DHF290-12-3 type
Number of charge conveyors: 1
Number of discharge conveyers: 1
Number of robots: 2

Features

- 1) Circulating hot air technology --- Reduction in temperature variation in furnace ->Consistent quality ensured!
- 2) Heating time reduced --- space and cost savings, free layout!
- 3) Unmanned autonomous operation --- reduced labor cost, easy connection to pre- and post-process!
